

**Look what cotton producers
in your area have to say!**

“My family has been raising cotton in this area since the early 40’s. Our gin has ginned as much as 54,000 bales in the past but weather has held us back for the last several years. In 2004, we had the best crop we’ve had in the last 10-15 years. Last year our gin ginned

4,500 bales, this year we will gin about 15,000. This is cotton country here. We’ve gotten rid of the boll weevil, and now have the technology where we can raise cotton. We just need the weather .”
